ART services in Sudan

Sudan has recently introduced the HIV/AIDS treatment with support from the GFATM. VCT/ART centers were established in all States capital cities.

Hundreds of physicians, medical officers, counselors and other supportive staff were trained on HIV/AIDS care and treatment using the adopted and adapted IMAI (Integrated management of adults and adolescents illness) developed by WHO. Antiretroviral drugs were first available in Sudan in 2001 through a private pharmaceutical company. Zidovudine (zidovair) was the first to be available followed by the rest of ARVS.

Since the beginning of 2004 ART was prescribed and monitored in 5 federal hospitals in Khartoum state ; namely Khartoum teaching hospital , Omdurman teaching hospital Bahri teaching hospital , Ribat University hospital and Military Central hospital then two state hospital is offering treatment which are Port Sudan hospital –Red Sea state .Elobied Hospital-North Kordofan state. And currently there is at least one centre per State

With the efforts made to increase the awareness of the public on existing services, many new clients (suspect & volunteer) have accessed these centers, where they will be provided by care ,treatment, education and support
